Summary

Senior Unity developer with 10+ years of professional experience, shipping games on mobile, Nintendo Switch, Xbox One and Netflix. I specialize in the systems behind the game: editor tools that let designers create content on their own, SDKs used by 50+ studios, and multiplayer networking. I enjoy making other developers and designers more productive, and I've worked across the whole range, from a founding indie team to a large mobile publisher.

Experience

Voodoo 2025 - 2026

Unity SDK Engineer

Maintained and extended Voodoo's internal Unity SDK, which covers a wide range of functionality and supports 50+ client studios. Focused on stable APIs and a smooth integration experience for the studios' developers.

Fortis Games 2024 - 2025

Staff Software Engineer

Tools engineer on an unannounced mobile multiplayer game. Built and maintained a suite of custom Unity editor tools that improved workflow and usability, so designers could create content for the game on their own.

Paladin Studios 2021 - 2023

Senior Unity Developer

Multiplayer systems developer on the Netflix game *Nailed it! Baking Bash*. Implemented and maintained the multiplayer technology and systems for a smooth and enjoyable player experience.

Paladin Studios 2017 - 2020

Unity Developer

Joined as a content/gameplay programmer and grew into specialized systems programming. Contributed to several mobile projects, prototypes and the Nintendo Switch game *Good Job!*.

Through Games 2014 - 2017

Co-Founder, Programmer

Member of the founding team that shipped the Xbox One game *FRU*, which won three Dutch Game Awards. Worked as both gameplay and tools programmer from development through launch.

NHTV 2017
Bachelor of Science, International Game Architecture and Design.

Breda University of Applied Sciences, Breda, The Netherlands

Projects

Zeepkist Mods and Modding Community
Active in the modding community for the Unity game Zeepkist. Built the GTR mod, which recorded players' races automatically and submitted them to a backend I built with **ASP.NET Core**, **Entity Framework** and **Docker**. The data powered in-game ghosts, world records and personal bests. Community developers also built their own websites and Discord bots on top of the API. *The project is no longer active.*
